JSON Web Token (JWT)
Human Computer Interaction

Certifications

JavaScript(Basic)
Front End Developer (React)

Tarcisius Daniel Hartanto

Software Engineer || MSCS @ NEU || Web App Dev
Seattle, Washington, United States

Summary

Passionate full-stack developer, which has been working on an ATS platform using React (front end) and Django (backend), along with Docker, AWS (deployment) and PostgreSQL (database).

Experience

Sinclair Digital

Software Engineer
February 2026 - May 2026 (4 months)
Seattle, Washington, United States

- Implemented centralized RBAC across UI and API layers using a strategy-based authorization model, ensuring consistent permission enforcement across frontend components and backend APIs
- Architected a configuration-driven form system with reusable input components, reducing duplicated form logic and enabling standardized form creation across workflows
- Engineered a Jira-style inline editing workflow within an initiative detail modal, replacing form-based editing and enabling direct field updates to simplify complex, multi-attribute updates
- Designed a scheduled archival workflow using AWS EventBridge Scheduler and Lambda to automatically archive reports resolved for two weeks and over.
- Resolved authentication flow bug in admin-provisioned account login path, preventing duplicate user creation during first-time user sign-in.
- Designed a global toast notification system with a custom React hook and Context API to standardize success and error feedback across user workflows
- Built an S3-based screenshot upload system with thumbnail previews to enhance bug reporting clarity
- Extended existing serverless infrastructure and CI/CD patterns from other company projects using Terraform and YAML-based workflows in collaboration with other engineers

BeaconFire Inc.

Software Engineer
November 2025 - January 2026 (3 months)

Seattle, Washington, United States

- Built a full-stack shoes e-commerce application, enabling users to favorite products.
- Designed and implemented RESTful APIs to support login and product recommendation.
- Developed an internal HR management tool to track applicants' visa status and housing information using MEARN stack.

Hx0Ventures
Software Engineer
December 2024 - May 2025 (6 months)
Seattle, Washington, United States

- Built RESTful APIs for user authentication and core features using Django, integrating them with the React-based UI.
- Developed interactive dashboard that visualizes datasets of ~200 records with pagination.
- Dockerized PostgreSQL database and backend services, eliminating environment configuration issues.
- Implemented CD pipeline with AWS to automate deployment across development to production environments.
- Implemented secure credential management using AWS Secrets Manager across all deployment environments.

Relaymile
Software Engineer Intern
March 2021 - June 2021 (4 months)
Seattle, Washington, United States

- Enhanced the company's web pages to fit multiple screen resolutions while maintaining accessibility standards.
- Engineered the UI for a new live-chat feature to enable responsive communication between the players of the industry.
- Initiated and developed an internal CSS framework to be adopted as the company's UI style development guideline.

CODEX powered by Telkom Indonesia
Software Engineer Intern
July 2019 - September 2019 (3 months)
Jakarta Metropolitan Area

- Engineered and improved search accuracy level of the HR internal tool, increasing job application process efficiency.

- Created reusable global UI components for the whole project, leading to a faster and cleaner development process.
- Integrated end-to-end testing and established detailed metrics for the happy and unhappy paths.

North Seattle College
Math and Computer Science Tutor
September 2017 - June 2018 (10 months)
United States

- Work with and help several people who have obstacles in Java and Python programming assignments or projects.
- A skill to interact and build a solid teamwork with other people by teaching and learning along with them.
